## How to Order Interconnect Cables

When ordering any factory terminated interconnect cable, please include these required elements:

Example	Qty.	Pair	Length	Model	Termination: Source End	Termination: Destination End
	1	Pair	3.0m	Big Sur	RCA	to RCA

### Choice of Applications:

3.5mm ↔ 3.5mm	3.5mm Male ↔ Female <sup>(1)</sup>	3.5mm ↔ RCA	DIN ↔ DIN <sup>(2)</sup>	RCA ↔ RCA	iPod 30-pin ↔ 3.5mm <sup>(1)</sup>	iPod 30-pin ↔ RCA <sup>(1)</sup>
						

<sup>(1)</sup> 3.5mm female and iPod 30-pin only available in certain models and certain lengths, please see the grid, <sup>(2)</sup> other DIN configurations available.

## Bridges & Falls

Bridges & Falls cables not only honor the fact that today's components require vastly more connectivity options than ever before, they take advantage of the efficiencies of making single-ended stereo cables in a single jacket to apply many of AudioQuest's most proven distortion-minimizing ingredients and design techniques. In Bridges & Falls you'll find better metals and other exotic materials

and technologies—including Air-Tube insulation (Dielectric), Dielectric-Bias System (DBS), and multi-layer Noise-Dissipation System (NDS)—at lower price points than ever before. While the design and materials employed in Bridges & Falls are formidable, there are very real reasons to choose cables from the

Rivers and Cosmic series. To accommodate the single (left/right in one) jackets, Bridges & Falls' solid conductors are smaller, and while Air-Tube insulation appears in this line, the tubes are by necessity smaller than you'll find in the Rivers and Cosmic series interconnects.

While DBS is present in a number of Bridges & Falls, DBS cannot extend all the way to the plugs. None

of this diminishes the astonishing cost-effective performance of Bridges & Falls, but it's important to know that even when the materials look identical there are still substantial reasons—reasons which are perfectly audible—for customers to choose Rivers and beyond when applications allow.

# Analogue-Audio Interconnect Cables – Bridges & Falls

Metal	Solid Long-Grain Copper (LGC)		Solid Perfect-Surface Copper (PSC)	Solid Perfect-Surface Copper+ (PSC+)
Geometry	Asymmetrical Double-Balanced (Lower Impedance on Ground, Same Quality + & – Conductors)

# How to Order Interconnect Cables

When ordering any factory terminated interconnect cable, please include these required elements:

	Qty.	Pair or Single	Length	Model	Termination: Source End	Termination: Destination End
Example	1	Pair	3.0m	Columbia	XLR	to XLR
	1	Single	4.5m	Red River	RCA	to RCA

When ordering 3 (or 5 or more) individual cables which are usually sold in pairs, please order:  
1 pair + 1 single (or 2 pairs + 1 single, as appropriate)

## Analogue-Audio Interconnect Cables

Pair prices shown. Also available as singles (such as for center channel or subwoofer) at 50% of pair price.

Metal	Solid Long-Grain Copper	Solid Perfect-Surface Copper+ (PSC+)	
Geometry	Triple-Balanced (Separate Ground-Reference Conductor)		
Dielectric	Nitrogen-Injected Hard-Cell Foam		Polyethylene Air-Tubes
Noise-Dissipation System	Metal-Layer NDS	Carbon-Based 3-Layer Noise-Dissipation System	
Jacket	Black/Red Braid or CL3/FT4 Bulk cable and plugs also available, see page 42	Black/Brown Braid or CL3/FT4 Bulk cable and plugs also available, see page 42	Black/Silver Braid
Terminations	Cold-Welded, Gold-Plated	Cold-Welded, Hanging-Silver directly over pure Purple Copper	

	RCA or XLR	RCA or XLR	RCA or XLR

## Digital-Audio Cables from HDMI to Computer Audio

Many of the design and material elements that have proven so effective in AudioQuest's analog cables are every bit as meaningful for digital- and computer-audio cables, including S/PDIF, HDMI, USB, USB iPod 30-pin, FireWire, and Ethernet. Solid-core conductors, superior conductor metals and insulation materials, proper geometry and overall precision of manufacture are no more or less important at the frontier of digital-audio cables than they are for analog cables.

AudioQuest's digital cables start with Long-Grain Copper (LGC) conductors, which is a low-distortion metal with fewer grain boundaries and low oxygen content. Each successive step up in the line adds the cost-effective performance benefits of silver plating (in increasing amounts), with the top cable in each digital cable family employing AudioQuest's best conductor metal, solid 100% Perfect-Surface Silver (PSS). Geometry is optimized for each application, with insulation materials ranging from nitrogen-injected hard-cell foam to solid-polyethylene. Because all audio cables are directional, all signal conductors are controlled for directionality and connectors are labeled to ensure optimal sound quality.

All dielectric (insulation) slows down and smears the signal traveling inside the conductor, and when

insulation is unbiased it slows down different frequencies at different energy levels by varying degrees. This is a real problem for time-sensitive, multi-octave audio, and a significant distortion mechanism for all audio cables, digital or analog.

On the frontier of computer audio the cabling and accessories matter every bit as much as in an all-analog audio system. The analog interconnects that connect your outboard DAC to your stereo are as important as the AC power cables that connect the computer audio components to your home's AC power. When using a USB, Ethernet or FireWire DAC, the cables that connect the computer and DAC have as profound an impact on the sound you hear as the sonic characteristics of the DAC itself. It was never really just 1's and 0's to begin with, and that's still true today. What's perhaps more surprising and less intuitive is that the peripheral cables that connect the computer to external storage and connect components over networks also make a significant qualitative difference in sound quality. Every cable in a network-audio system adds distortion to the signal. Therefore the entire computer-audio experience will be more fun and more involving if low-distortion cables are employed throughout the entire computer- and network-audio system.

## Lightning-to-USB Cables

Ever since CDs first appeared, and CD transports and processors required a cable designed for digital to be used between them, AudioQuest has been advancing the frontier of *what's possible*. Starting with those first digital-coax (S/P-DIF) and Toslink cables, on through AES/EBU, AT&T ST, FireWire, HDMI, Ethernet and USB, AudioQuest has over and over proven that digital audio data is as delicate and vulnerable as analog audio, sometimes even more so.

While digital data is in many ways more robust than analog data, the transmission of digital information is itself an analog function. The turning on & off, or the variation in voltage required to signify a "bit" of data, is an imperfect analog process. It's an attempt to produce, transmit and receive a perfect square wave - an impossible ideal. Our declaration "Do No Harm!" is as pertinent for real-time digital data and packetized digital data as it was for our first analog cables back in 1978.

The latest addition to AudioQuest's comprehensive USB cable lineup includes 4 existing models now available with Apple's® Lightning™ connector (as used on all recent iOS devices) on one end, and the standard USB A connector on the other end. Whether connecting mobile devices and their content to the USB ports now common to so many automobile entertainment systems, or to a full-blown stereo system at home, a cable with minimal distortion is required

(Continued)

## Lightning-to-USB Cables

for sound that is full, engaging and 3 Dimensional. Thin and flat is a great form factor for an iPhone or iPad®, but that's not how the music from those marvelous devices should sound!

These new versions of Forest, Cinnamon, Carbon and Diamond all use solid conductors, as is true for all AudioQuest's USB cables. Solid conductors eliminate strand interaction, one of the biggest sources of distortion in cables. Three of the models use silver plating over LGC copper because silver plating is a very cost-effective way to gain much of the low-distortion advantage of solid silver at a fraction of the cost.

Forest's superior sound is in part made possible by its solid 0.5% silver conductors and Metal-Layer Noise-Dissipation System (NDS). Cinnamon steps up to solid 1.25% silver conductors. Carbon's solid 5% silver conductors and Carbon-Based 3-layer NDS significantly increase the sense of audio immersion, and Diamond, with its solid 100% Perfect-Surface Silver (PSS) conductors and Dielectric-Bias System (DBS), offers the ultimate in natural ease and sonic purity.

AQ's take-no-prisoners Lightning connector uses a PVC shell, over a solid one-piece die-cast shield, over stress-free internal connections.

### USB cables are available for a wide range of applications:

## Cat6 & Cat7 Ethernet/Communication Cables

The convenience of wireless transmission of multi-room audio and video comes at a steep qualitative price. Even generic Ethernet cable offers audio performance that's clearly superior to the fastest, most robust wireless networked-audio system. Moving beyond the limitations of wireless, the specific cable matters too. Bulk data transfers may not be appreciably affected by cable, but lesser Ethernet cable does affect the real-time playback quality of any Ethernet-based network-audio system.

AudioQuest offers multiple CAT600 (Cat6) and CAT700 (Cat7) bulk Ethernet cables for whole-house "electronic plumbing," as well as prepared RJ/E Ethernet cables. While Cat6/CAT600 cables support network speeds up to 1 Gigabit per second (Gbps), Cat7/CAT700 cables

support network speeds up to 100 Gbps at 100 meters length. AudioQuest's CAT700 and RJ/E prepared Ethernet cables are all built on a Cat7 foundation, the highest Cat standard.

In addition to many of AudioQuest's hallmark materials and techniques—solid conductors, superior metals, conductor directionality control—the top Ethernet models also feature extreme-performance Telegärtner RJ45 connectors which employ a patented combination of geometry and circuitry to minimize impedance-mismatch distortion. The scale of this performance difference is slap-in-the-ears obvious and indicative of the difference all connectors and materials make. It's never just 1's and 0's, especially when it's *your* music!

# How to Order Prepared Speaker Cables

To order: first please specify type of connector (banana or spade), then the finish of connector (gold or silver).

Pair prices shown. Also available in singles (i.e., for center channel, subwoofer or mono) at half pair price.

When ordering any factory terminated speaker cable, please include these required elements:

Qty.	Pair or Single	Length	Model	FR, SBW, DBW or SBA	AMPLIFIER Termination	SPEAKER Termination	Gold or Silver
1	Pair	3m	Rocket 88	FR	500 Series Multi-Spade to Banana		Gold
1	Single	1.8m	Castle Rock	SBA	1000 Series Multi-Spade to Banana		Silver

When ordering 3 (or 5 or 7) individual cables, please order: 1 pair + 1 single (or 2 or 3 pairs + 1 single, as appropriate)

## Terminations

### Full-Range (FR) (Non-BiWire) All models

### Single-BiWire (SBW)

Rocket, Rock & Tree models only  
Same cost as Full-Range cable

### Double-BiWire (DBW)

All models  
Same cost as the 2 pairs of cables separately

### Single-BiAmp (SBA)

Rocket, Rock & Tree models only

### REL Acoustic™ Stereo High-Level Subwoofer Cable

For use with REL subwoofers, speakon to 3x spades or 3x bananas  
Same cost as single cable (1/2 of pair price)

(Refer to your amplifier's owner's manual regarding cautions and special instructions)

### Termination Upcharge for SBA

## Dielectric-Bias System (DBS, US Patent numbers 7,126,055 & 7,872,195 B1)

High-frequency engineers often believe that “low-frequency” audio is just so simple ... but in fact, it is very difficult to handle a multi-octave audio signal without damaging the time relationships that define individual sounds.

Even when multi-channel audio is packaged as a single-channel digital stream, as in HDMI, USB, FireWire, Coax, AES/EBU, Toslink, etc., time-based data corruption, known as “jitter,” causes unfixable damage to the information package.

In addition to insulating, “insulation” is also a “dielectric.” This means that it interacts with any nearby electrical signal, slowing down the signal.

Absolute speed is not itself relevant, but when insulation is un-biased, it slows down different frequencies and different amplitudes by varying degrees, a significant distortion mechanism.

AudioQuest’s DBS creates a strong and stable electrostatic field, which saturates and polarizes (organizes) the molecules of the insulation. This minimizes both energy storage in the dielectric, and the multiple nonlinear time-delays. Sound appears from a surprisingly blacker background with unexpected detail and dynamic contrast. Because DBS creates a field, but does no “work,” the DBS pack’s batteries will last for years. A test button and LED allow for the occasional battery check.

## Noise-Dissipation System (NDS)

The challenge of shielding an audio or video signal from through-the-air interference, usually called RFI (Radio-Frequency Interference), is an old game. It's also a game which is usually easily won. Despite promotional material trying to induce fear and the seeking of comfort with one brand or another, shielding just isn't that difficult. However, almost all shielded cables absorb and then drain noise/RF energy to "component ground," modulating and distorting the critical "reference" ground plane.

It is ironic that in doing its job of protecting the signal conductors, the shield actually picks up

more RFI than the signal conductors, because it is much bigger. However, the cure doesn't have to be worse than the disease ... by "shielding the shield," it is possible to have 100% shield coverage, and to dump almost no energy on the reference ground plane. AudioQuest's Noise-Dissipation System (NDS) uses alternating layers of metal- and carbon-loaded synthetics to "shield the shield," absorbing and reflecting most of this energy before it reaches the layer attached to ground. The result is that sound comes from a quiet black background. Music and dialog are easier to understand and more compelling.

## AC Power

While speaker cables need to maintain perfect integrity across the entire audio band, power cables only have to be “perfect” in a much narrower band. The amount of energy transferred and the size of the associated magnetic fields put AC power cables and speaker cables in a class of their own. It’s not surprising that AC power and speaker cables are subject to many of the same distortion mechanisms, and benefit from many of the same damage-minimizing design elements and techniques.

AudioQuest’s entry-level power cords utilize semi-solid conductors that maintain constant position over the length of the cable, minimizing magnetic interaction among the semi-solid strands. Most of AudioQuest’s power cords, however, use solid conductors, which completely eliminate this distortion. Superior metals minimize distortion in all applications, so AQ’s power cords use the same, low-distortion, high-performance metals found in AQ’s signal-carrying audio cables. AudioQuest’s Noise-Dissipation System (NDS) is employed in NRG-4 and up. Typical AC power cable shield systems absorb and then drain noise and RF energy to component ground,

which modulates and distorts the critical “reference” ground plane. NDS’s alternating layers of metal- and carbon-loaded synthetics “shield the shield,” absorbing and reflecting most of this energy before it reaches the layer attached to component ground.

The wall plugs on AC power cables are a crucial material element as well ... While many of AQ’s wall plugs are Gold-Plated, AQ’s top-tier AC power cables use Hanging-Silver, a process in which the pure-copper plugs are submerged (“hung”) into a vat of extreme-purity silver (rather than the conventional “barrel” plating in a drum tumbler). The result is a very thick, Direct-Silver Plate with no performance-degrading intermediary materials (such as nickel). NRG-500 Wall Plugs use Hanging Gold directly over pure Purple Copper, while NRG-1000 Wall Plugs use Hanging-Silver directly over pure Red Copper.

Low-distortion AC power cables improve the performance of all AV system components. They also make just as much difference on both the input and output of power-line conditioners.

### AC Power Plugs

## Accessories

### SorboGel Q-Foot System

Set of 4 energy-absorbing feet with "tray" which improves performance and protects furniture. Each foot supports up to 4 kg. (8 lbs.).

UK Retail

89.00/Set of 4

### RCA Noise-Stopper Caps

Blocks a significant path for incoming high-frequency energy to interfere with circuit performance.

UK Retail

35.00/Set of 10

### XLR Output Noise-Stopper Caps

Blocks a significant path for incoming high-frequency energy to interfere with circuit performance.

UK Retail

25.00/Set of 2

### XLR Input Noise-Stopper Caps

Blocks a significant path for incoming high-frequency energy to interfere with circuit performance.

UK Retail

25.00/Set of 2

### Binding-Post Wrench

Real tool-quality double-ended nut driver with metal inserts.

Fits 7/16" & 1/2" binding posts.

UK Retail

10.95

### PSC BiWire Jumpers

Solid PSC Copper Jumpers replace stamped jumpers supplied with BiWireable speakers. Four x 4" jumpers.

- Choose:
- BiWire Jumpers-G (Direct-Gold Plated) or
  - BiWire Jumpers-S (Direct-Silver Plated)

UK Retail

21.95/Set of 4

### PreAmp Jumpers

Solid PSC+ conductors in Polyethylene Air-Tubes. Replaces factory fitted "U" jumpers on integrated amps & receivers.

UK Retail

25.00/Pair

### Voltage Upgrade Kit for DBS

**FOR USE WITH EXISTING DBS CABLES ONLY.**

Kit includes:  
2 x 72V DBS packs (inc. batteries)  
4 x Velcro bands

UK Retail

129.00/Kit

# CleanScreen

## CleanScreen Kit

Micro fibre cloth (x 2)

10 ml spray

150 ml bottle

Retractable brush

Part Number: AQCSKIT

UK Retail

17.00

## 10 ml. Pen Display (Ships with 24 Pens)

Micro fibre cleaning  
cloth included

Part Number: 69-090-01

UK Retail

3.50/Per Pen

## HDTV Display - 200 ml./6.75 oz. (Ships with 20 Bottles)

Micro fibre cleaning  
cloth included

Part Number: 69-071-01

UK Retail

17.00/Per Bottle

## Laptop Display - 30 ml./1 oz. (Ships with 20 Bottles)

Micro fibre cleaning cloth included

Part Number: 69-069-11

UK Retail

6.95/Per Bottle

# Instant Tool-less Connectors (ITC)

## ITC-24, ITC-18 JUST PUSH!

### Packs of 50

#### ITC 50 Pack with Stickers

Easy-to-Appl, colour bands for all models of ITC plugs

#### Colour Bands for ITC Connectors

Silicon rubber bands fit all ITC connectors – even after they're attached to the cable – for easy cable identification.  
Available in bags of 20. One colour per bag – no mixed colours.  
Available in 10 colours (please see above).

UK Retail

3.50/Bag of 20

### Retail Packaging

# Installer ("i") Series Cables in Packs of 5 (No Retail Packaging)

## iPacks

Time, space, and money ... all finite resources for any installer, all of which are conserved with AQ's iPacks. These 5-packs of cables ship with no retail packaging, take up less space on the van and reduce waste to dispose of on the job. iPacks include easy-to-remove stickers that offer an immediate visual inventory of how many cables are left in the bag, and assist in billing for each and every cable installed in a job. iPacks are an installer's best friend.
